### Epigen (EPGN) (NM\_001013442) Human Recombinant Protein - TP314501M

RefSeq ORF: 399

Synonyms: ALGV3072; EPG; epigen; PRO9904

**Summary:** The protein encoded by this gene is a member of the epidermal growth factor family.

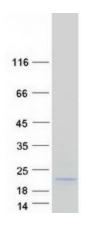

Members of this family are ligands for the epidermal growth factor receptor and play a role in

cell survival, proliferation and migration. This protein has been reported to have high mitogenic activity but low affinity for its receptor. Expression of this transcript and protein have been reported in cancer specimens of the breast, bladder, and prostate. Alternative

splicing results in multiple transcript variants. [provided by RefSeq, Aug 2012]

**Protein Families:** Transmembrane
