Synonyms: CMDTFF; CMD2A; CMH7; CTN1; RCMT; TNNCT Summary: Troponin I (Tn1), along with troponin T (TnT) and troponin C (TnC), is one of 3 subunit form the troponin complex of the thin filaments of striated muscle. TnI is the inhibitor subunit; blocking actin-myosin interactions and thereby mediating striated muscle re The TnI subfamily contains three genes: TnI-skeletal-fast-twitch, TnI-skeletal-slow-twi TnI-cardiac. This gene encodes the TnI-cardiac protein and is exclusively expressed in muscle tissues. Mutations in this gene cause familial hypertrophic cardiomyopathy ty (CMH7) and familial restrictive cardiomyopathy (RCM). Troponin I is useful in making diagnosis of heart failure, and of ischemic heart disease. An elevated level of troponi now used as indicator of acute myocardial injury in patients hospitalized with moderate/severe Coronavirus Disease 2019 (COVID-19). Such elevation has also bee associated with higher risk of mortality in cardiovascular disease patients hospitalized COVID-19. [provided by RefSeq, Aug 2020]
