**Summary:** Cross-linked envelope protein of keratinocytes. It is a keratinocyte protein that first appears in the cell cytosol, but ultimately becomes cross-linked to membrane proteins by transglutaminase. All that results in the formation of an insoluble envelope beneath the plasma membrane.[UniProtKB/Swiss-Prot Function]

### Product images:

Coomassie blue staining of purified SPRR2A protein (Cat# [TP315197]). The protein was produced from HEK293T cells transfected with SPRR2A cDNA clone (Cat# [RC215197]) using MegaTran 2.0 (Cat# [TT210002]).
