Summary: This gene encodes a peptidoglycan recognition protein, which belongs to the N-acetylmuramoyl-L-alanine amidase 2 family. This protein hydrolyzes the link between N-acetylmuramoyl residues and L-amino acid residues in bacterial cell wall glycopeptides, and thus may play a scavenger role by digesting biologically active peptidoglycan into biologically inactive fragments. In vitro antifungal activity of PGLYRP-2. *C. albicans* (10,000 CFU) in 400 µL PBS were incubated without or with PGLYRP-2 (OriGene [TP315773]) in different concentration (1, 10 or 100 µg/ml) at 37 C for 2, 6, 24 hours. At the end of incubation, the samples were subjected to fungal culture and plate-colony counting. Results were presented as colony-forming units (CFU) of *C. albicans* (mean \pm SD) in cultures. Each symbol represents an individual sample, and data are representative of three independent experiments. * $p < 0.05$. Figure cited from PLoS ONE, PMID: 26039076

Coomassie blue staining of purified PGLYRP2 protein (Cat# [TP315773]). The protein was produced from HEK293T cells transfected with PGLYRP2 cDNA clone (Cat# [RC215773]) using MegaTran 2.0 (Cat# [TT210002]).
