Epithelial Stromal Interaction 1 (EPSTI1) (NM_033255) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human epithelial stromal interaction 1 (breast) (EPSTI1), transcript

variant 2, 20 µg

Species: Human Expression Host: HEK293T

Expression cDNA Clone >RC217229 representing NM_033255 or AA Sequence: Red=Cloning site Green=Tags(s)

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-Myc/DDK

Predicted MW: 35.3 kDa

Concentration: $>0.05 \mu g/\mu L$ as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Preparation: Recombinant protein was captured through anti-DDK affinity column followed by conventional

chromatography steps.

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and handling

conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 150280

Locus ID: 94240

UniProt ID: Q96|88

RefSeq Size: 1529

Cytogenetics: 13q14.11

RefSeq ORF: 921

Synonyms: BRESI1

Summary: The protein encoded by this gene has been shown to promote tumor invasion and metastasis in

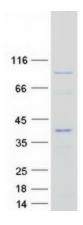

some invasive cancer cells when overexpressed. Expression of this gene has been shown to be upregulated by direct binding of the Kruppel like factor 8 protein to promoter sequences. The translated protein interacts with the amino terminal region of the valosin containing protein gene product, resulting in the nuclear translocation of the nuclear factor kappa B subunit 1 gene product, and activation of target genes. Overexpression of this gene has been observed in

some breast cancers and in some individuals with systemic lupus erythematosus (SLE).
