## CABP (CABP1) (NM\_031205) Human Recombinant Protein

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Recombinant protein of human calcium binding protein 1 (CABP1), transcript variant 1, 20 μg

Species: Human
Expression Host: HEK293T

**Expression cDNA Clone** >RC218317 representing NM\_031205 or AA Sequence: Red=Cloning site Green=Tags(s)

**TRTRPLEQKLISEEDLAANDILDYKDDDDKV** 

Tag: C-Myc/DDK

Predicted MW: 25.8 kDa

Concentration: >0.05 µg/µL as determined by microplate BCA method

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

**Buffer:** 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

**Preparation:** Recombinant protein was captured through anti-DDK affinity column followed by

conventional chromatography steps.

**Note:** For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

**Stability:** Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 112482

**Locus ID:** 9478

#### CABP (CABP1) (NM\_031205) Human Recombinant Protein - TP318317

UniProt ID: Q9NZU7

RefSeq Size: 1201

Cytogenetics: 12q24.31

RefSeq ORF: 681

Synonyms: CALBRAIN; HCALB\_BR

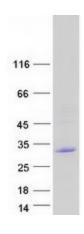

Summary: Calcium binding proteins are an important component of calcium mediated cellular signal

transduction. This gene encodes a protein that belongs to a subfamily of calcium binding proteins which share similarity to calmodulin. The protein encoded by this gene regulates the gating of voltage-gated calcium ion channels. This protein inhibits calcium-dependent inactivation and supports calcium-dependent facilitation of ion channels containing voltage-

dependent L-type calcium channel subunit alpha-1C. This protein also regulates calcium-dependent activity of inositol 1,4,5-triphosphate receptors, P/Q-type voltage-gated calcium channels, and transient receptor potential channel TRPC5. This gene is predominantly expressed in retina and brain. Alternative splicing results in multiple transcript variants

encoding disinct isoforms. [provided by RefSeq, Jul 2012]

### **Product images:**

Coomassie blue staining of purified CABP1 protein (Cat# TP318317). The protein was produced from HEK293T cells transfected with CABP1 cDNA clone (Cat# [RC218317]) using MegaTran 2.0 (Cat# [TT210002]).
