| Summary: The nuclear import of the spliceosomal snRNPs U1, U2, U4 and U5, is dependent on a presence of a complex nuclear localization signal. The latter is composed of the 5'-2,2 terminal trimethylguanosine (m3G) cap structure of the U snRNA and the Sm core do The protein encoded by this gene interacts specifically with m3G-cap and functions a snRNP-specific nuclear import receptor. Alternatively spliced transcript variants enco same protein have been identified for this gene. [provided by RefSeq, Jul 2008] | | |
