	Glutaredoxin 1 (GLRX) (NM_002064) Human Recombinant Protein – TP319385M
Cytogenetics:	5q15
RefSeq ORF:	318
Synonyms:	GRX; GRX1
Summary:	This gene encodes a member of the glutaredoxin family. The encoded protein is a cytoplasmic enzyme catalyzing the reversible reduction of glutathione-protein mixed disulfides. This enzyme highly contributes to the antioxidant defense system. It is crucial for several signalling pathways by controlling the S-glutathionylation status of signalling mediators. It is involved in beta-amyloid toxicity and Alzheimer's disease. Multiple alternatively spliced transcript variants encoding the same protein have been identified. [provided by RefSeq, Aug 2011]
