H2BC17 (NM_003527) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human histone cluster 1, H2bo (HIST1H2BO), 20 μg

Species: Human
Expression Host: HEK293T

Expression cDNA Clone >RC219561 protein sequence or AA Sequence: Red=Cloning site Green=Tags(s)

Tag: C-Myc/DDK
Predicted MW: 13.7 kDa

Concentration: $>0.05 \mu g/\mu L$ as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Preparation: Recombinant protein was captured through anti-DDK affinity column followed by

conventional chromatography steps.

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

Summary: Histones are basic nuclear proteins that are responsible for the nucleosome structure of the

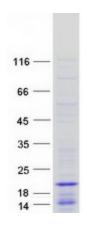

chromosomal fiber in eukaryotes. Two molecules of each of the four core histones (H2A, H2B, H3, and H4) form an octamer, around which approximately 146 bp of DNA is wrapped in repeating units, called nucleosomes. The linker histone, H1, interacts with linker DNA between nucleosomes and functions in the compaction of chromatin into higher order structures. This gene is intronless and encodes a replication-dependent histone that is a member of the histone H2B family. Transcripts from this gene lack polyA tails but instead contain a palindromic termination element. This gene is found in the small histone gene cluster on

chromosome 6p22-p21.3. [provided by RefSeq, Aug 2015]
