INS-IGF2 (NM 001042376) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human INS-IGF2 readthrough transcript (INS-IGF2), transcript variant

2, 20 µg

Species: Human
Expression Host: HEK293T

Expression cDNA Clone >RC220218 representing NM_001042376

or AA Sequence: Red=Cloning site Green=Tags(s)

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-Myc/DDK

Predicted MW: 21.4 kDa

Concentration: $>0.05 \mu g/\mu L$ as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Preparation: Recombinant protein was captured through anti-DDK affinity column followed by

conventional chromatography steps.

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 001035835

 Locus ID:
 723961

 UniProt ID:
 F8WCM5

RefSeq Size: 828

Cytogenetics: 11p15.5 RefSeq ORF: 600

Synonyms: INSIGF

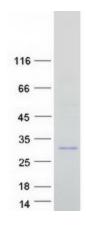

Summary: This locus includes two alternatively spliced read-through transcript variants which align to

the INS gene in the 5' region and to the IGF2 gene in the 3' region. One transcript is predicted to encode a protein which shares the N-terminus with the INS protein but has a distinct and longer C-terminus, whereas the other transcript is a candidate for nonsense-mediated decay (NMD). The transcripts are imprinted and are paternally expressed in the limb and eye.
