	VAMP1 (NM_014231) Human Recombinant Protein – TP320854L
Cytogenetics:	12p13.31
RefSeq ORF:	354
Synonyms:	CMS25; SPAX1; SYB1; VAMP-1
Summary:	Synapotobrevins, syntaxins, and the synaptosomal-associated protein SNAP25 are the main components of a protein complex involved in the docking and/or fusion of synaptic vesicles with the presynaptic membrane. The protein encoded by this gene is a member of the vesicle-associated membrane protein (VAMP)/synaptobrevin family. Mutations in this gene are associated with autosomal dominant spastic ataxia 1. Multiple alternative splice variants have been described, but the full-length nature of some variants has not been defined. [provided by RefSeq, Jul 2014]
Protein Families	Secreted Protein, Transmembrane
Protein Pathway	s: SNARE interactions in vesicular transport

Product images:

Coomassie blue staining of purified VAMP1 protein (Cat# [TP320854]). The protein was produced from HEK293T cells transfected with VAMP1 cDNA clone (Cat# [RC220854]) using MegaTran 2.0 (Cat# [TT210002]).
