### EOMES (NM\_005442) Human Recombinant Protein - TP321014M

**RefSeq:** NP 005433

**Locus ID:** 8320

UniProt ID: <u>095936</u>, <u>B7Z4K0</u>

RefSeq Size: 2756
Cytogenetics: 3p24.1
RefSeq ORF: 2058
Synonyms: TBR2

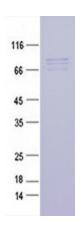

Summary: This gene belongs to the TBR1 (T-box brain protein 1) sub-family of T-box genes that share the

common DNA-binding T-box domain. The encoded protein is a transcription factor which is crucial for embryonic development of mesoderm and the central nervous system in vertebrates. The protein may also be necessary for the differentiation of effector CD8+ T cells which are involved in defense against viral infections. A similar gene disrupted in mice is shown to be essential during trophoblast development and gastrulation. Alternative splicing results in multiple

transcript variants. [provided by RefSeq, May 2013]
