	PACAP (ADCYAP1) (NM_001099733) Human Recombinant Protein – TP321298L
RefSeq Size:	3187
Cytogenetics:	18p11.32
RefSeq ORF:	528
Synonyms:	PACAP
Summary:	This gene encodes a secreted proprotein that is further processed into multiple mature peptides. These peptides stimulate adenylate cyclase and increase cyclic adenosine monophosphate (cAMP) levels, resulting in the transcriptional activation of target genes. The products of this gene are key mediators of neuroendocrine stress responses. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Feb 2013]
