Proprotein Convertase 2 (PCSK2) (NM 002594) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human proprotein convertase subtilisin/kexin type 2 (PCSK2), 20 μg

Species: Human Expression Host: HEK293T

Expression cDNA Clone >RC222498 representing NM_002594 or AA Sequence: Red=Cloning site Green=Tags(s)

LKSILNKN

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-Myc/DDK
Predicted MW: 67.9 kDa

Concentration: >0.05 μg/μL as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Preparation: Recombinant protein was captured through anti-DDK affinity column followed by conventional

chromatography steps.

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Proprotein Convertase 2 (PCSK2) (NM_002594) Human Recombinant Protein - TP322498

Stability: Stable for 12 months from the date of receipt of the product under proper storage and handling

conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 002585

 Locus ID:
 5126

 UniProt ID:
 P16519

 RefSeq Size:
 4745

 Cytogenetics:
 20p12.1

RefSeq ORF: 1914

Synonyms: NEC-2; NEC 2; NEC2; PC2; SPC2

Summary: This gene encodes a member of the subtilisin-like proprotein convertase family, which includes

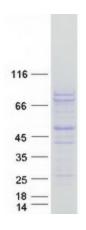

proteases that process protein and peptide precursors trafficking through regulated or constitutive branches of the secretory pathway. The protein undergoes an initial autocatalytic processing event and interacts with a neuroendocrine secretory protein in the ER, exits the ER and sorts to secretory granules, where it is cleaved and catalytically activated during intracellular transport. The encoded protease is packaged into and activated in dense core secretory granules and expressed in the neuroendocrine system and brain. This gene encodes

one of the seven basic amino acid-specific members which cleave their substrates at single or paired basic residues. It functions in the proteolytic activation of polypeptide hormones and neuropeptides precursors. Single nucleotide polymorphisms in this gene may increase susceptibility to myocardial infarction and type 2 diabetes. This gene may also play a role in tumor development and progression. Alternatively spliced transcript variants encoding multiple

isoforms have been observed for this gene. [provided by RefSeq, Jan 2014]

Protein Families: Druggable Genome, Protease, Secreted Protein

Product images:

Coomassie blue staining of purified PCSK2 protein (Cat# TP322498). The protein was produced from HEK293T cells transfected with PCSK2 cDNA clone (Cat# [RC222498]) using MegaTran 2.0 (Cat# [TT210002]).
