	Pirin (PIR) (NM_003662) Human Recombinant Protein – TP323111L
UniProt ID:	<u>000625, A0A024RBX6</u>
RefSeq Size:	1316
Cytogenetics:	Xp22.2
RefSeq ORF:	870
Summary:	This gene encodes a member of the cupin superfamily. The encoded protein is an Fe(II)- containing nuclear protein expressed in all tissues of the body and concentrated within dot-like subnuclear structures. Interactions with nuclear factor I/CCAAT box transcription factor as well as B cell lymphoma 3-encoded oncoprotein suggest the encoded protein may act as a transcriptional cofactor and be involved in the regulation of DNA transcription and replication. Alternatively spliced transcript variants have been described. [provided by RefSeq, Jul 2008]
