| Summary:         | The protein encoded by this gene belongs to the BCL2 protein family. BCL2 family members<br>form hetero- or homodimers and act as anti- or pro-apoptotic regulators that are involved in<br>a wide variety of cellular activities. This protein contains a single BCL2 homology domain 3<br>(BH3), and has been shown to bind BCL2 proteins and function as an apoptotic activator. This<br>protein is found to be sequestered to myosin V motors by its association with dynein light<br>chain 2, which may be important for sensing intracellular damage and triggering apoptosis.<br>Alternatively spliced transcript variants encoding different isoforms have been identified.<br>[provided by RefSeq, Jul 2008] |
