	CNBP (NM_001127196) Human Recombinant Protein – TP325167L
Cytogenetics:	3q21.3
RefSeq ORF:	510
Synonyms:	CNBP1; DM2; PROMM; RNF163; ZCCHC22; ZNF9
Summary:	This gene encodes a nucleic-acid binding protein with seven zinc-finger domains. The protein has a preference for binding single stranded DNA and RNA. The protein functions in cap- independent translation of ornithine decarboxylase mRNA, and may also function in sterol- mediated transcriptional regulation. A CCTG expansion from <30 repeats to 75-11000 repeats in the first intron of this gene results in myotonic dystrophy type 2. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2016]
Protein Families	: Druggable Genome, Transcription Factors

## Product images:

Coomassie blue staining of purified CNBP protein (Cat# [TP325167]). The protein was produced from HEK293T cells transfected with CNBP cDNA clone (Cat# [RC225167]) using MegaTran 2.0 (Cat# [TT210002]).
