| Summary:         | The protein encoded by this gene is a serine protease inhibitor belonging to the serpin<br>superfamily whose targets include elastase, plasmin, thrombin, trypsin, chymotrypsin, and<br>plasminogen activator. This protein is produced in the liver, the bone marrow, by lymphocytic<br>and monocytic cells in lymphoid tissue, and by the Paneth cells of the gut. Defects in this gene<br>are associated with chronic obstructive pulmonary disease, emphysema, and chronic liver<br>disease. Several transcript variants encoding the same protein have been found for this gene.<br>[provided by RefSeq, Aug 2020] |
| Protein Families | Druggable Genome, ES Cell Differentiation/IPS, Secreted Protein   |
| Protein Pathway  | s: Complement and coagulation cascades  |
