Summary: The protein encoded by this gene belongs to the SEC14 cytosolic factor family. It has similarity

to yeast SEC14 and to Japanese flying squid RALBP which suggests a possible role of the gene product in an intracellular transport system. Multiple alternatively spliced transcript variants have been found for this gene; some variants represent read-through transcripts that include

exons from the upstream gene C17orf86. [provided by RefSeq, Feb 2011]
