| Summary:         | This gene encodes a loosely associated peripheral membrane protein related to the LanC<br>family of bacterial membrane-associated proteins involved in the biosynthesis of<br>antimicrobial peptides. This protein may play a role as a peptide-modifying enzyme<br>component in eukaryotic cells. Previously considered a member of the G-protein-coupled<br>receptor superfamily, this protein is now in the LanC family. Multiple alternatively spliced<br>variants, encoding the same protein, have been identified. [provided by RefSeq, Nov 2008] |
