#### Tropomodulin 2 (TMOD2) (NM\_001142885) Human Recombinant Protein - TP327766L

UniProt ID: Q9NZR1

Cytogenetics: 15q21.2

RefSeq ORF: 945

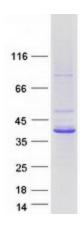

Synonyms: N-TMOD; NTMOD

**Summary:** This gene encodes a neuronal-specific member of the tropomodulin family of actin-regulatory

proteins. The encoded protein caps the pointed end of actin filaments preventing both elongation and depolymerization. The capping activity of this protein is dependent on its association with tropomyosin. Alternatively spliced transcript variants encoding different

isoforms have been described. [provided by RefSeq, Dec 2008]
