Summary: This gene encodes a protein with 5-phosphatase activity toward polyphosphate inositol. The

> protein localizes to the cytosol in regions lacking actin stress fibers. It is thought that this protein may negatively regulate the actin cytoskeleton. Alternatively spliced transcript variants

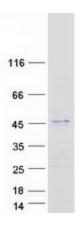

encoding different isoforms have been identified. [provided by RefSeq, Oct 2008]

Coomassie blue staining of purified INPP5K protein (Cat# TP327852). The protein was produced from HEK293T cells transfected with INPP5K cDNA clone (Cat# [RC227852]) using

MegaTran 2.0 (Cat# [TT210002]).
