#### NDE1 (NM\_001143979) Human Recombinant Protein - TP327919M

UniProt ID: Q9NXR1

RefSeq Size: 3936

Cytogenetics: 16p13.11 RefSeq ORF: 1005

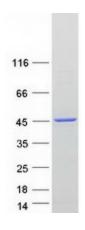

Synonyms: HOM-TES-87; LIS4; MHAC; NDE; NUDE; NUDE1

Summary: This gene encodes a member of the nuclear distribution E (NudE) family of proteins. The

encoded protein is localized at the centrosome and interacts with other centrosome components as part of a multiprotein complex that regulates dynein function. This protein plays an essential role in microtubule organization, mitosis and neuronal migration. Mutations in this gene cause lissencephaly 4, a disorder characterized by lissencephaly, severe brain atrophy, microcephaly, and severe cognitive disability. Alternative splicing results

in multiple transcript variants. [provided by RefSeq, Mar 2012]
