#### PIGX (NM\_001166304) Human Recombinant Protein - TP328208M

UniProt ID: Q8TBF5

Cytogenetics: 3q29
RefSeq ORF: 867
Synonyms: PIG-X

Summary: This gene encodes a type I transmembrane protein in the endoplasmic reticulum (ER). The

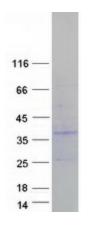

protein is an essential component of glycosylphosphatidylinositol-mannosyltransferase I, which transfers the first of the four mannoses in the GPI-anchor precursors during GPI-anchor biosynthesis. Studies in rat indicate that the protein is translated from a non-AUG translation initiation site. Alternative splicing results in multiple transcript variants. [provided by RefSeq,
