Summary: This gene encodes a member of the gasdermin-domain containing protein family. Other

gasdermin-family genes are implicated in the regulation of apoptosis in epithelial cells, and are linked to cancer. Alternative splicing and the use of alternative promoters results in multiple transcript variants. Additional variants have been described, but they are candidates for nonsense-mediated mRNA decay (NMD) and are unlikely to be protein-coding. [provided

Coomassie blue staining of purified GSDMB protein (Cat# TP328330). The protein was produced from HEK293T cells transfected with GSDMB cDNA clone (Cat# [RC228330]) using

MegaTran 2.0 (Cat# [TT210002]).
