### CD1E (NM\_001185115) Human Recombinant Protein

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Recombinant protein of human CD1e molecule (CD1E), transcript variant 8, 20 μg

Species: Human Expression Host: HEK293T

**Expression cDNA** >RC231127 representing NM 001185115

Clone or AA Sequence: Red=Cloning site Green=Tags(s)

MLLLFLLFEGLCCPGENTAAPQALQSYHLAAEEQLSFRMLQTSSFANHSWAHSEGSGWLGDLQTHGWDTV LGTIRFLKPWSHGNFSKQELKNLQSLFQLYFHSFIQIVQASAGQFQLELKPEAWLSCGPSPGPGRLQLVC HVSGFYPKPVWVMWMRGEQEQRGTQRGDVLPNADETWYLRATLDVAAGEAAGLSCRVKHSSLGGHDLIIH WGGYSIFLILICLTVIVTLVILVVVDSRLKKQSPVFLMGANTQDTKNSRHQFCLAQVSWIKNRVLKKWKT

**RLNQLW** 

**TRTRPLEQKLISEEDLAANDILDYKDDDDKV** 

Tag: C-Myc/DDK

Predicted MW: 32.7

**Concentration:** >0.05 μg/μL as determined by microplate BCA method

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

**Buffer:** 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

**Preparation:** NULL or Add: Recombinant proteins was captured through anti-DDK affinity column followed by

conventional chromatography steps.

**Note:** For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and handling

conditions. Avoid repeated freeze-thaw cycles.

**RefSeq:** NP 001172044

Locus ID: 913

#### CD1E (NM\_001185115) Human Recombinant Protein - TP331127

**UniProt ID:** <u>P15812</u>, <u>A2RRL5</u>

Cytogenetics: 1q23.1 RefSeq ORF: 858

Synonyms: CD1A; R2

Summary: This gene encodes a member of the CD1 family of transmembrane glycoproteins, which are

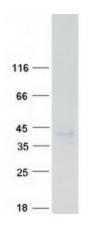

structurally related to the major histocompatibility complex (MHC) proteins and form heterodimers with beta-2-microglobulin. The CD1 proteins mediate the presentation of primarily lipid and glycolipid antigens of self or microbial origin to T cells. The human genome contains five CD1 family genes organized in a cluster on chromosome 1. The CD1 family members are thought to differ in their cellular localization and specificity for particular lipid ligands. The protein encoded by this gene localizes within Golgi compartments, endosomes, and lysosomes, and is cleaved into a stable soluble form. The soluble form is required for the intracellular processing of some glycolipids into a form that can be presented by other CD1 family members. Many alternatively spliced transcript variants encoding different isoforms have been described. Additional transcript variants have been found; however, their biological validity

has not been determined. [provided by RefSeq, Jun 2010]

**Protein Families:** Druggable Genome, Transmembrane

Protein Pathways: Hematopoietic cell lineage

## **Product images:**

Coomassie blue staining of purified CD1E protein (Cat# TP331127). The protein was produced from HEK293T cells transfected with CD1E cDNA clone (Cat# [RC231127]) using MegaTran 2.0 (Cat# [TT210002]).
