## Doublecortin (DCX) (NM\_001195553) Human Recombinant Protein

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Purified recombinant protein of Homo sapiens doublecortin (DCX), transcript variant 5, 100

με

Species: Human
Expression Host: HEK293T

**Expression cDNA Clone** >RC231188 representing NM\_001195553

or AA Sequence: Red=Cloning site Green=Tags(s)

**TRTRPL**EQKLISEEDLAANDILDYKDDDDK**V** 

Tag: C-Myc/DDK

Predicted MW: 41.1

Concentration: >0.05 µg/µL as determined by microplate BCA method

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

**Buffer:** 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Preparation: NULL or Add: Recombinant proteins was captured through anti-DDK affinity column followed

by conventional chromatography steps.

**Note:** For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

**RefSeq:** NP 001182482

 Locus ID:
 1641

 UniProt ID:
 A8K340

 Cytogenetics:
 Xq23

 RefSeq ORF:
 1098

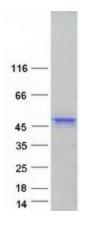

Synonyms: DBCN; DC; LISX; SCLH; XLIS

**Summary:** This gene encodes a member of the doublecortin family. The protein encoded by this gene is

a cytoplasmic protein and contains two doublecortin domains, which bind microtubules. In the developing cortex, cortical neurons must migrate over long distances to reach the site of their final differentiation. The encoded protein appears to direct neuronal migration by regulating the organization and stability of microtubules. In addition, the encoded protein interacts with LIS1, the regulatory gamma subunit of platelet activating factor acetylhydrolase, and this interaction is important to proper microtubule function in the developing cortex. Mutations in this gene cause abnormal migration of neurons during development and disrupt the layering of the cortex, leading to epilepsy, cognitive disability, subcortical band heterotopia ("double cortex" syndrome) in females and lissencephaly ("smooth brain" syndrome) in males. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Sep 2010]

**Protein Families:** Druggable Genome

## **Product images:**

Coomassie blue staining of purified DCX protein (Cat# [TP331188]). The protein was produced from HEK293T cells transfected with DCX cDNA clone (Cat# [RC231188]) using MegaTran 2.0 (Cat# [TT210002]).
