Tgfb2 (BC011055) Mouse Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Purified recombinant protein of Mouse transforming growth factor, beta 2 (cDNA clone

MGC:7998 IMAGE:3585774), complete cds, with C-terminal MYC/DDK tag, expressed in

HEK293T cells, 20ug

Species: Mouse

Expression Host: HEK293T

Expression cDNA Clone >MR203277 protein sequence or AA Sequence: Red=Cloning site Green=Tags(s)

Τ

INPEASASPCCVSQDLEPLTILYYIGNTPKIEQLSNMIVKSCKCS

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-MYC/DDK

Predicted MW: 29.1 kDa

Concentration: >0.05 μg/μL as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C after receiving vials.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

 Locus ID:
 21808

 UniProt ID:
 P27090

 RefSeq Size:
 2047

Tgfb2 (BC011055) Mouse Recombinant Protein - TP503277

Cytogenetics: 1 89.95 cM

RefSeq ORF: 765

Synonyms: BB105277; Tgf-beta2; Tgfb-2

Summary: This gene encodes a secreted ligand of the TGF-beta (transforming growth factor-beta)

> superfamily of proteins. Ligands of this family bind various TGF-beta receptors leading to recruitment and activation of SMAD family transcription factors that regulate gene

> expression. The encoded preproprotein is proteolytically processed to generate a latency-

associated peptide (LAP) and a mature peptide, and is found in either a latent form

composed of a mature peptide homodimer, a LAP homodimer, and a latent TGF-beta binding protein, or in an active form consisting solely of the mature peptide homodimer. The mature peptide may also form heterodimers with other TGF-beta family members. Mice lacking a functional copy of this gene display developmental defects in multiple organs and perinatal lethality. Heterozygous mutant mice exhibit aortic root aneurysm. This gene encodes multiple isoforms that may undergo similar proteolytic processing. [provided by RefSeq, Aug 2016]
