## Mob1b (NM 026735) Mouse Recombinant Protein

## **Product data:**

**Product Type:** Recombinant Proteins

**Description:** Purified recombinant protein of Mouse MOB kinase activator 1B (Mob1b), with C-terminal

MYC/DDK tag, expressed in HEK293T cells, 20ug

Species: Mouse Expression Host: HEK293T

Expression cDNA Clone A DN

or AA Sequence:

A DNA sequence from Mouse cDNA ORF Clone, MR218570, encoding Mouse full-length

Mob1b

Tag: C-MYC/DDK

Predicted MW: 25.5 kDa

**Concentration:** >0.05 μg/μL as determined by microplate BCA method

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

**Buffer:** 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

**Note:** For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

**Storage:** Store at -80°C after receiving vials.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 081011

 Locus ID:
 68473

 UniProt ID:
 Q8BPB0

 RefSeq Size:
 3171

 Cytogenetics:
 5 E1

RefSeg ORF: 648

**Synonyms:** 1110003E08Rik; AU015450; B230364F10; Mobkl1a

**Summary:** 

Activator of LATS1/2 in the Hippo signaling pathway which plays a pivotal role in organ size control and tumor suppression by restricting proliferation and promoting apoptosis. The core of this pathway is composed of a kinase cascade wherein STK3/MST2 and STK4/MST1, in complex with its regulatory protein SAV1, phosphorylates and activates LATS1/2 in complex with its regulatory protein MOB1, which in turn phosphorylates and inactivates YAP1 oncoprotein and WWTR1/TAZ. Phosphorylation of YAP1 by LATS1/2 inhibits its translocation into the nucleus to regulate cellular genes important for cell proliferation, cell death, and cell migration. Stimulates the kinase activity of STK38L (By similarity).[UniProtKB/Swiss-Prot Function]
