Eph receptor A1 (EPHA1) (NM 005232) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Purified recombinant protein of human EPH receptor A1 (EPHA1), with C-terminal DDK/His

tag, expressed in human cells, 20 µg

Species: Human
Expression Host: HEK293T

Expression cDNA Clone

or AA Sequence:

A DNA sequence from TrueORF clone, RC600037, encoding the region (Lys26 - Glu547) of

human EPHA1

Tag: C-DDK/His

Predicted MW: 59 kDa

Concentration: >0.05 μg/μL as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: PBS, pH 7.4, 10% glycerol

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

RefSeq: <u>NP 005223</u>

 Locus ID:
 2041

 UniProt ID:
 P21709

 RefSeq Size:
 3369

Cytogenetics: 7q34-q35

RefSeq ORF: 1641

Synonyms: EPH; EPHT; EPHT1

Eph receptor A1 (EPHA1) (NM_005232) Human Recombinant Protein - TP700137

Summary: This gene belongs to the ephrin receptor subfamily of the protein-tyrosine kinase family. EPH

and EPH-related receptors have been implicated in mediating developmental events, particularly in the nervous system. Receptors in the EPH subfamily typically have a single kinase domain and an extracellular region containing a Cys-rich domain and 2 fibronectin type III repeats. The ephrin receptors are divided into 2 groups based on the similarity of their extracellular domain sequences and their affinities for binding ephrin-A and ephrin-B ligands.

This gene is expressed in some human cancer cell lines and has been implicated in

carcinogenesis. [provided by RefSeq, Jul 2008]

Protein Families: Druggable Genome, Protein Kinase, Transmembrane

Protein Pathways: Axon guidance
