PODXL (NM 005397) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Purified recombinant protein of Homo sapiens podocalyxin-like (PODXL), transcript variant 2,

residues Gln32-Pro461, expressed in HEK293 cells.

Species: Human
Expression Host: HEK293T

Expression cDNA Clone

or AA Sequence:

A DNA sequence from TrueORF clone, RC210816, encoding the extracellular domain (Gln32 -

Pro461) of human podocalyxin-like (PODXL), transcript variant 2

Tag: C-DDK/His Predicted MW: 47.7 kDa

Concentration: >0.05 μg/μL as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: PBS, pH 7.4, 10% glycerol

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 005388

Locus ID: 5420

UniProt ID: <u>000592</u>, <u>Q96N83</u>

RefSeq Size: 5911 Cytogenetics: 7q32.3 RefSeq ORF: 1578

Synonyms: gp135; Gp200; PC; PCLP; PCLP-1; PDX; PODXL1

Summary:

This gene encodes a member of the sialomucin protein family. The encoded protein was originally identified as an important component of glomerular podocytes. Podocytes are highly differentiated epithelial cells with interdigitating foot processes covering the outer aspect of the glomerular basement membrane. Other biological activities of the encoded protein include: binding in a membrane protein complex with Na+/H+ exchanger regulatory factor to intracellular cytoskeletal elements, playing a role in hematopoetic cell differentiation, and being expressed in vascular endothelium cells and binding to L-selectin. [provided by RefSeq, Jul 2008]

Protein Families:

Transmembrane
