MCSF Receptor (CSF1R) (NM_005211) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human colony stimulating factor 1 receptor (CSF1R), residues 20-

517aa, with C-terminal DDK tag, expressed in sf9, 20ug

Species: Human

Expression Host: Sf9

Expression cDNA Clone

or AA Sequence:

A DNA sequence from TrueORF clone, RC205288, encoding the region(Met-Ile20-Pro517) of

Homo sapiens CSF1R

Tag: C-DDK

Predicted MW: 55.1 kDa

Concentration: $>0.05 \mu g/\mu L$ as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 50 mM Tris-HCl, 100 mM glycine, pH 8.0, 10% glycerol

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 005202

 Locus ID:
 1436

 UniProt ID:
 P07333

 RefSeq Size:
 3985

 Cytogenetics:
 5q32

 RefSeq ORF:
 2916

Synonyms: BANDDOS; C-FMS; CD115; CSF-1R; CSFR; FIM2; FMS; HDLS; M-CSF-R

Summary:

The protein encoded by this gene is the receptor for colony stimulating factor 1, a cytokine which controls the production, differentiation, and function of macrophages. This receptor mediates most if not all of the biological effects of this cytokine. Ligand binding activates the receptor kinase through a process of oligomerization and transphosphorylation. The encoded protein is a tyrosine kinase transmembrane receptor and member of the CSF1/PDGF receptor family of tyrosine-protein kinases. Mutations in this gene have been associated with a predisposition to myeloid malignancy. The first intron of this gene contains a transcriptionally inactive ribosomal protein L7 processed pseudogene oriented in the opposite direction. Alternative splicing results in multiple transcript variants. Expression of a splice variant from an LTR promoter has been found in Hodgkin lymphoma (HL), HL cell lines and anaplastic large cell lymphoma. [provided by RefSeq, Mar 2017]

Protein Families: Druggable Genome, Protein Kinase, Transmembrane

Protein Pathways: Cytokine-cytokine receptor interaction, Endocytosis, Hematopoietic cell lineage, Pathways in

cancer
