

Product datasheet for TP710300

CEE (GET4) (NM_015949) Human Recombinant Protein

Product data:

Product Type:	Recombinant Proteins			
Description:	Purified recombinant protein of Human golgi to ER traffic protein 4 homolog (S. cerevisiae) (GET4), full length, with C-terminal DDK tag, expressed in sf9, 20ug			
Species:	Human			
Expression Host:	Sf9			
Expression cDNA Clone or AA Sequence:	A DNA sequence from TrueORF clone, RC200220, encoding human full-length C7orf20			
Tag:	C-DDK			
Predicted MW:	36.3 kDa			
Concentration:	>0.05 μ g/ μ L as determined by microplate BCA method			
Purity:	> 80% as determined by SDS-PAGE and Coomassie blue staining			
Buffer:	50 mM Tris-HCl, 100 mM glycine, pH 8.0, 10% glycerol			
Note:	For testing in cell culture applications, please filter before use. Note that you may experience some loss of protein during the filtration process.			
Storage:	Store at -80°C.			
Stability:	Stable for 12 months from the date of receipt of the product under proper storage and handling conditions. Avoid repeated freeze-thaw cycles.			
RefSeq:	<u>NP 057033</u>			
Locus ID:	51608			
UniProt ID:				
	<u>Q7L5D6</u>			
RefSeq Size:	<u>Q7L5D6</u> 2106			
RefSeq Size: Cytogenetics:				
•	2106			
Cytogenetics:	2106 7p22.3			

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

CEE (GET4) (NM_015949) Human Recombinant Protein – TP710300

As part of a cytosolic protein quality control complex, the BAG6/BAT3 complex, maintains Summary: misfolded and hydrophobic patches-containing proteins in a soluble state and participates to their proper delivery to the endoplasmic reticulum or alternatively can promote their sorting to the proteasome where they undergo degradation (PubMed:20676083, PubMed:21636303, PubMed:21743475, PubMed:28104892). The BAG6/BAT3 complex is involved in the posttranslational delivery of tail-anchored/type II transmembrane proteins to the endoplasmic reticulum membrane. Recruited to ribosomes, it interacts with the transmembrane region of newly synthesized tail-anchored proteins and together with SGTA and ASNA1 mediates their delivery to the endoplasmic reticulum (PubMed:20676083, PubMed:28104892, PubMed:25535373). Client proteins that cannot be properly delivered to the endoplasmic reticulum are ubiquitinated and sorted to the proteasome (PubMed:28104892). Similarly, the BAG6/BAT3 complex also functions as a sorting platform for proteins of the secretory pathway that are mislocalized to the cytosol either delivering them to the proteasome for degradation or to the endoplasmic reticulum (PubMed:21743475). The BAG6/BAT3 complex also plays a role in the endoplasmic reticulum-associated degradation (ERAD), a quality control mechanism that eliminates unwanted proteins of the endoplasmic reticulum through their retrotranslocation to the cytosol and their targeting to the proteasome. It maintains these retrotranslocated proteins in an unfolded yet soluble state condition in the cytosol to ensure their proper delivery to the proteasome (PubMed:21636303).[UniProtKB/Swiss-Prot Function]
