GM CSF (CSF2) (NM 000758) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human colony stimulating factor 2 (granulocyte-macrophage) (CSF2)

Species: Human E. coli **Expression Host:**

Expression cDNA Clone

Ala18-Glu144

or AA Sequence:

Tag: Tag Free Predicted MW: 14.6 kDa **Concentration:** lot specific

Purity: >95% as determined by SDS-PAGE and Coomassie blue staining

Buffer: Provided lyophilized from a 0.2 µm filtered solution of 20 mM Tris-HCl, 150 mM NaCl

ED50 is less than 0.1 ng/ml as determined by the dose-dependent stimulation of human TF-1 **Bioactivity:**

cell proliferation. Specific Activity of 1.0 x 107 IU/ mg.

Endotoxin: < 0.1 EU per µg protein as determined by LAL test

Reconstitution Method: Always centrifuge tubes before opening. Do not mix by vortex or pipetting. Dissolve the

> lyophilized protein in ddH2O. It is not recommended to reconstitute a concentration less than 100 µg/ml. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

Store at -80°C. Storage:

Stability: Stable for at least 6 months from date of receipt under proper storage and handling

conditions.

RefSeq: NP 000749

Locus ID: 1437

UniProt ID: P04141 Cytogenetics: 5q31.1

Synonyms: CSF: GMCSF

Summary:

The protein encoded by this gene is a cytokine that controls the production, differentiation, and function of granulocytes and macrophages. The active form of the protein is found extracellularly as a homodimer. This gene has been localized to a cluster of related genes at chromosome region 5q31, which is known to be associated with interstitial deletions in the 5q- syndrome and acute myelogenous leukemia. Other genes in the cluster include those encoding interleukins 4, 5, and 13. This gene plays a role in promoting tissue inflammation. Elevated levels of cytokines, including the one produced by this gene, have been detected in SARS-CoV-2 infected patients that develop acute respiratory distress syndrome. Mice deficient in this gene or its receptor develop pulmonary alveolar proteinosis. [provided by RefSeq, Aug 2020]

Protein Families:

Druggable Genome, ES Cell Differentiation/IPS, Secreted Protein

Protein Pathways:

Cytokine-cytokine receptor interaction, Fc epsilon RI signaling pathway, Hematopoietic cell lineage, Jak-STAT signaling pathway, Natural killer cell mediated cytotoxicity, T cell receptor signaling pathway
