SLBP (FABP7) (NM_001446) Human Recombinant Protein – TP720119M

Summary:The gene encodes a small, highly conserved cytoplasmic protein that bind long-chain fatty
acids and other hydrophobic ligands. The encoded protein is important in the establishment
of the radial glial fiber in the developing brain. Alternative splicing and promoter usage
results in multiple transcript variants encoding different isoforms. Pseudogenes of this gene
are found on multiple chromosomes. [provided by RefSeq, Jan 2016]
