PDGF beta (PDGFB) (NM_002608) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human platelet-derived growth factor beta polypeptide (simian

sarcoma viral (v-sis) oncogene homolog) (PDGFB), transcript variant 1

Species: Human
Expression Host: E. coli

Expression cDNA Clone

or AA Sequence:

Ser82-Thr190

Tag: Tag Free
Predicted MW: 12.4 kDa
Concentration: lot specific

Purity: >95% as determined by SDS-PAGE and Coomassie blue staining

Buffer: Provided lyophilized from a 0.2 μm filtered solution of 20 mM Tris-HCl, 150 mM NaCl

Endotoxin: < 0.1 EU per µg protein as determined by LAL test

Reconstitution Method: Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not

recommended to reconstitute to a concentration less than 100 μ g/ml. Dissolve the lyophilized protein in 4mM HCl . Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

Storage: Store at -80°C.

Stability: Stable for at least 6 months from date of receipt under proper storage and handling

conditions.

RefSeq: <u>NP 002599</u>

Locus ID: 5155

UniProt ID: <u>P01127</u>, <u>A0A384NYY3</u>

Cytogenetics: 22q13.1

Synonyms: c-sis; IBGC5; PDGF-2; PDGF2; SIS; SSV

Summary:

This gene encodes a member of the protein family comprised of both platelet-derived growth factors (PDGF) and vascular endothelial growth factors (VEGF). The encoded preproprotein is proteolytically processed to generate platelet-derived growth factor subunit B, which can homodimerize, or alternatively, heterodimerize with the related platelet-derived growth factor subunit A. These proteins bind and activate PDGF receptor tyrosine kinases, which play a role in a wide range of developmental processes. Mutations in this gene are associated with meningioma. Reciprocal translocations between chromosomes 22 and 17, at sites where this gene and that for collagen type 1, alpha 1 are located, are associated with dermatofibrosarcoma protuberans, a rare skin tumor. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2015]

Protein Families:

Druggable Genome

Protein Pathways:

Cytokine-cytokine receptor interaction, Focal adhesion, Gap junction, Glioma, MAPK signaling pathway, Melanoma, Pathways in cancer, Prostate cancer, Regulation of actin cytoskeleton, Renal cell carcinoma
