RAGE (AGER) (NM_001136) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human advanced glycosylation end product-specific receptor (AGER),

transcript variant 1

Species: Human Expression Host: HEK293

Expression cDNA Clone

or AA Sequence:

Ala23-Ala344

Tag: C-His

Predicted MW: 35.2 kDa **Concentration:** lot specific

Purity: >95% as determined by SDS-PAGE and Coomassie blue staining

Buffer: Provided lyophilized from a 0.2 μm filtered solution of 20 mM Tris-HCl, 150 mM NaCl

Bioactivity: Binding assay (PMID: <u>29420566</u>)

Endotoxin: < 0.1 EU per μg protein as determined by LAL test

Reconstitution Method: Always centrifuge tubes before opening. Do not mix by vortex or pipetting. Dissolve the

lyophilized protein in ddH2O. It is not recommended to reconstitute a concentration less than 100 µg/ml. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

Storage: Store at -80°C.

Stability: Stable for at least 6 months from date of receipt under proper storage and handling

conditions.

RefSeq: NP 001127

Locus ID: 177

UniProt ID: Q15109, <u>A0A1U9X785</u>, <u>B4DNX3</u>

Cytogenetics: 6p21.32

Synonyms: RAGE; SCARJ1; sRAGE

Summary:

The advanced glycosylation end product (AGE) receptor encoded by this gene is a member of the immunoglobulin superfamily of cell surface receptors. It is a multiligand receptor, and besides AGE, interacts with other molecules implicated in homeostasis, development, and inflammation, and certain diseases, such as diabetes and Alzheimer's disease. Many alternatively spliced transcript variants encoding different isoforms, as well as non-protein-coding variants, have been described for this gene (PMID:18089847). [provided by RefSeq, May 2011]

Protein Families:

Druggable Genome, Secreted Protein, Transmembrane
