#### TrkB (NTRK2) (NM\_001007097) Human Recombinant Protein - TP720421XL

Summary: This gene encodes a member of the neurotrophic tyrosine receptor kinase (NTRK) family. This

kinase is a membrane-bound receptor that, upon neurotrophin binding, phosphorylates itself

and members of the MAPK pathway. Signalling through this kinase leads to cell differentiation. Mutations in this gene have been associated with obesity and mood

disorders. Alternative splicing results in multiple transcript variants. [provided by RefSeq, May

**Protein Families:** Druggable Genome, Protein Kinase, Transmembrane

Protein Pathways: MAPK signaling pathway, Neurotrophin signaling pathway
