### ULBP2 (NM\_025217) Human Recombinant Protein

#### **Product data:**

**Product Type:** Recombinant Proteins

**Description:** Recombinant protein of human UL16 binding protein 2 (ULBP2)

Species: Human Expression Host: HEK293

**Expression cDNA Clone** 

Gly26-Ser217

or AA Sequence:

Tag: C-His

Predicted MW: 22.8 kDa

Concentration: lot specific

**Purity:** >95% as determined by SDS-PAGE and Coomassie blue staining

Buffer: Provided lyophilized from a 0.2 μm filtered solution of 20 mM Tris-HCl, 150 mM NaCl

**Endotoxin:** < 0.1 EU per μg protein as determined by LAL test

**Reconstitution Method:** Always centrifuge tubes before opening. Do not mix by vortex or pipetting. Dissolve the

lyophilized protein in ddH2O. It is not recommended to reconstitute a concentration less than 100 µg/ml. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

Storage: Store at -80°C.

Stability: Stable for at least 6 months from date of receipt under proper storage and handling

conditions.

**RefSeq:** NP 079493

 Locus ID:
 80328

 UniProt ID:
 Q9BZM5

 Cytogenetics:
 6q25.1

Synonyms: ALCAN-alpha; N2DL2; NKG2DL2; RAET1H; RAET1L

**Summary:** 

This gene encodes a major histocompatibility complex (MHC) class I-related molecule that binds to the NKG2D receptor on natural killer (NK) cells to trigger release of multiple cytokines and chemokines that in turn contribute to the recruitment and activation of NK cells. The encoded protein undergoes further processing to generate the mature protein that is either anchored to membrane via a glycosylphosphatidylinositol moiety, or secreted. Many malignant cells secrete the encoded protein to evade immunosurveillance by NK cells. This gene is located in a cluster of multiple MHC class I-related genes on chromosome 6. [provided by RefSeq, Jul 2015]

**Protein Families:** Druggable Genome, Secreted Protein, Transmembrane

**Protein Pathways:** Natural killer cell mediated cytotoxicity
