

## Product datasheet for TP720428L

## CCL3L3 (NM\_001001437) Human Recombinant Protein

## **Product data:**

| Product Type:                            | Recombinant Proteins   |
|--|--|
| Description:                             | Recombinant protein of human chemokine (C-C motif) ligand 3-like 3 (CCL3L3)  |
| Species:                                 | Human  |
| Expression Host:                         | HEK293   |
| Expression cDNA Clone<br>or AA Sequence: | Ala24-Ala93  |
| Tag:                                     | C-His  |
| Predicted MW:                            | 8.8 kDa  |
| Concentration:                           | lot specific   |
| Purity:                                  | >95% as determined by SDS-PAGE and Coomassie blue staining   |
| Buffer:                                  | Lyophilized from a 0.2 um filtered solution of 20mM PB,150mM NaCl,pH7.4.   |
| Reconstitution Method:                   | Always centrifuge tubes before opening. Do not mix by vortex or pipetting. Dissolve the lyophilized protein in ddH2O. It is not recommended to reconstitute a concentration less than 100 µg/ml. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. |
| Storage:                                 | Lyophilized protein should be stored at < -20°C, though stable at room temperature for 3 weeks. Reconstituted protein solution can be stored at 4-7°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.                                  |
| Stability:                               | Stable for at least 6 months from date of receipt under proper storage and handling conditions.  |
| RefSeq:                                  | <u>NP 001001437</u>  |
| Locus ID:                                | 414062   |
| UniProt ID:                              | <u>P16619</u>  |
| RefSeq Size:                             | 780  |
| Cytogenetics:                            | 17q12  |
| RefSeq ORF:                              | 279  |
| Synonyms:                                | 464.2; D17S1718; G0S19-2; LD78; LD78BETA; SCYA3L; SCYA3L1  |

|                                     | CCL3L3 (NM_001001437) Human Recombinant Protein – TP720428L  |
|-------------------------------------|--|
| Summary:                            | This gene is one of several cytokine genes that are clustered on the q-arm of chromosome 17. Cytokines are a family of secreted proteins that function in inflammatory and immunoregulatory processes. The protein encoded by this gene binds to several chemokine receptors, including chemokine binding protein 2 and chemokine (C-C motif) receptor 5 (CCR5). CCR5 is a co-receptor for HIV, and binding of this protein to CCR5 inhibits HIV entry. The copy number of this gene varies among individuals, where most individuals have one to six copies, and a minority of individuals have zero or more than six copies. There are conflicting reports about copy number variation of this gene and its correlation to disease susceptibility.[provided by RefSeq, Apr 2014] |
