	NGF (NM_002506) Human Recombinant Protein – TP720591M
Summary:	This gene is a member of the NGF-beta family and encodes a secreted protein which homodimerizes and is incorporated into a larger complex. This protein has nerve growth stimulating activity and the complex is involved in the regulation of growth and the differentiation of sympathetic and certain sensory neurons. Mutations in this gene have been associated with hereditary sensory and autonomic neuropathy, type 5 (HSAN5), and dysregulation of this gene's expression is associated with allergic rhinitis. [provided by RefSeq, Jul 2008]
Protein Familie	: Druggable Genome, Secreted Protein
Protein Pathwa	ys: Apoptosis, MAPK signaling pathway, Neurotrophin signaling pathway
