	MINPP1 (NM_004897) Human Recombinant Protein – TP720678L
Summary:	This gene encodes multiple inositol polyphosphate phosphatase; an enzyme that removes 3- phosphate from inositol phosphate substrates. It is the only enzyme known to hydrolzye inositol pentakisphosphate and inositol hexakisphosphate. This enzyme also converts 2,3 bisphosphoglycerate (2,3-BPG) to 2-phosphoglycerate; an activity formerly thought to be exclusive to 2,3-BPG synthase/2-phosphatase (BPGM) in the Rapoport-Luebering shunt of the glycolytic pathway.[provided by RefSeq, Sep 2009]
Protein Families	: Druggable Genome
Protein Pathwa	<b>/s:</b> Inositol phosphate metabolism
