PAI1 (SERPINE1) (NM_000602) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Purified recombinant protein of Human serpin peptidase inhibitor, clade E (nexin,

plasminogen activator inhibitor type 1), member 1 (SERPINE1), transcript variant 1

Species: Human

Expression Host: HEK293

Expression cDNA Clone

e Val24-Pro402

or AA Sequence:

Tag: C-His

Predicted MW: 43.82 kDa

Concentration: lot specific

Purity: >95% as determined by SDS-PAGE and Coomassie blue staining

Buffer: Provided lyophilized from a 0.2 μm filtered solution of 20 mM Tris-HCl, 150 mM NaCl

Endotoxin: Endotoxin level is < 0.1 ng/μg of protein (< 1 EU/μg)

Reconstitution Method: Always centrifuge tubes before opening. Do not mix by vortex or pipetting. Dissolve the

lyophilized protein in ddH2O. It is not recommended to reconstitute a concentration less than 100 µg/ml. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

Storage: Store at -80°C.

Stability: Stable for at least 6 months from date of receipt under proper storage and handling

conditions.

RefSeq: NP 000593

Locus ID: 5054

UniProt ID: <u>P05121</u>, <u>A0A024QYT5</u>

RefSeq Size: 3207 Cytogenetics: 7q22.1 RefSeq ORF: 1206

Synonyms: PAI; PAI-1; PAI1; PLANH1

PAI1 (SERPINE1) (NM_000602) Human Recombinant Protein - TP720683L

Summary: This gene encodes a member of the serine proteinase inhibitor (serpin) superfamily. This

member is the principal inhibitor of tissue plasminogen activator (tPA) and urokinase (uPA), and hence is an inhibitor of fibrinolysis. The protein also functions as a component of innate antiviral immunity. Defects in this gene are the cause of plasminogen activator inhibitor-1 deficiency (PAI-1 deficiency), and high concentrations of the gene product are associated with

thrombophilia. [provided by RefSeq, Aug 2020]

Protein Families: Druggable Genome, Secreted Protein

Protein Pathways: Complement and coagulation cascades, p53 signaling pathway
