	MAP1LC3A (NM_032514) Human Recombinant Protein – TP720854M
Summary:	MAP1A and MAP1B are microtubule-associated proteins which mediate the physical
	interactions between microtubules and components of the cytoskeleton. MAP1A and MAP1B
	each consist of a heavy chain subunit and multiple light chain subunits. The protein encoded
	by this gene is one of the light chain subunits and can associate with either MAP1A or MAP1B.
	Two transcript variants encoding different isoforms have been found for this gene. The
	expression of variant 1 is suppressed in many tumor cell lines, suggesting that may be
	involved in carcinogenesis. [provided by RefSeq, Feb 2012]
