SULT2B1 (NM_177973) Human Recombinant Protein - TP720859XL

Summary: Sulfotransferase enzymes catalyze the sulfate conjugation of many hormones,

 $neurotransmitters, drugs, and xenobiotic compounds. These \ cytosolic \ enzymes \ are \ different$

in their tissue distributions and substrate specificities. The gene structure (number and

length of exons) is similar among family members. This gene sulfates

dehydroepiandrosterone but not 4-nitrophenol, a typical substrate for the phenol and estrogen sulfotransferase subfamilies. Two alternatively spliced variants that encode

different isoforms have been described. [provided by RefSeq, Jul 2008]

Protein Pathways: Androgen and estrogen metabolism, Sulfur metabolism
