	VCP (NM_007126) Human Recombinant Protein – TP720905
Summary:	This gene encodes a member of the AAA ATPase family of proteins. The encoded protein plays a role in protein degradation, intracellular membrane fusion, DNA repair and
	replication, regulation of the cell cycle, and activation of the NF-kappa B pathway. This protein
	forms a homohexameric complex that interacts with a variety of cofactors and extracts
	ubiquitinated proteins from lipid membranes or protein complexes. Mutations in this gene
	cause IBMPFD (inclusion body myopathy with paget disease of bone and frontotemporal
	dementia), ALS (amyotrophic lateral sclerosis) and Charcot-Marie-Tooth disease in human
	patients. [provided by RefSeq, Aug 2017]
