

# Product datasheet for TP721036L

## ITM2B (NM\_021999) Human Recombinant Protein

### **Product data:**

#### **Product Type: Recombinant Proteins Description:** Purified recombinant protein of Human integral membrane protein 2B (ITM2B) Species: Human **HEK293 Expression Host:** Expression cDNA Clone Tyr76-Ser266 or AA Sequence: C-His Tag: **Predicted MW:** 23.3 kDa **Purity:** >95% as determined by SDS-PAGE and Coomassie blue staining **Buffer:** Provided lyophilized from a 0.2 µm filtered solution of 20 mM Tris-HCl, 150 mM NaCl Endotoxin: Endotoxin level is < 0.1 ng/ $\mu$ g of protein (< 1 EU/ $\mu$ g) **Reconstitution Method:** Always centrifuge tubes before opening. Do not mix by vortex or pipetting. Dissolve the lyophilized protein in ddH2O. It is not recommended to reconstitute a concentration less than 100 µg/ml. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Store at -80°C. Storage: Stability: Stable for at least 3 months from date of receipt under proper storage and handling conditions. NP 068839 **RefSeq:** Locus ID: 9445 **UniProt ID:** Q9Y287, A0A384MDP7 **RefSeq Size:** 1896 Cytogenetics: 13q14.2 **RefSeq ORF:** 798 Synonyms: ABRI; BRI; BRI2; BRICD2B; E3-16; E25B; FBD; imBRI2; RDGCA

	ITM2B (NM_021999) Human Recombinant Protein – TP721036L
Summary:	Amyloid precursor proteins are processed by beta-secretase and gamma-secretase to produce beta-amyloid peptides which form the characteristic plaques of Alzheimer disease. This gene encodes a transmembrane protein which is processed at the C-terminus by furin or furin-like proteases to produce a small secreted peptide which inhibits the deposition of beta-amyloid. Mutations which result in extension of the C-terminal end of the encoded protein, thereby increasing the size of the secreted peptide, are associated with two neurogenerative diseases, familial British dementia and familial Danish dementia. [provided by RefSeq, Oct 2009]
Protein Familie	es: Druggable Genome, Transmembrane
