	MAG (NM_002361) Human Recombinant Protein – TP721039XL
Summary:	The protein encoded by this gene is a type I membrane protein and member of the immunoglobulin superfamily. It is thought to be involved in the process of myelination. It is a lectin that binds to sialylated glycoconjugates and mediates certain myelin-neuron cell-cell interactions. Three alternatively spliced transcripts encoding different isoforms have been described for this gene. [provided by RefSeq, Nov 2010]
Protein Families	Druggable Genome, Transmembrane
Protein Pathway	s: Cell adhesion molecules (CAMs)
