GABARAP (NM_007278) Human Recombinant Protein - TP721164

Summary: Gamma-aminobutyric acid A receptors [GABA(A) receptors] are ligand-gated chloride

channels that mediate inhibitory neurotransmission. This gene encodes GABA(A) receptor-associated protein, which is highly positively charged in its N-terminus and shares sequence similarity with light chain-3 of microtubule-associated proteins 1A and 1B. This protein clusters neurotransmitter receptors by mediating interaction with the cytoskeleton. [provided
