

# Product datasheet for TP721185XL

## FGF1 (NM\_000800) Human Recombinant Protein

### **Product data:**

#### **Product Type: Recombinant Proteins Description:** Purified recombinant protein of Human fibroblast growth factor 1 (acidic) (FGF1), transcript variant 1 Species: Human **Expression Host:** E. coli **Expression cDNA Clone** Ala2-Asp155 or AA Sequence: Tag Free Tag: Predicted MW: 31.6 kDa **Concentration:** lot specific **Purity:** >95% as determined by SDS-PAGE and Coomassie blue staining **Buffer:** Provided lyophilized from a 0.2 µm filtered solution of 20 mM Tris-HCl, 150 mM NaCl Endotoxin: Endotoxin level is $< 0.1 \text{ ng/}\mu\text{g}$ of protein ( $< 1 \text{ EU/}\mu\text{g}$ ) **Reconstitution Method:** Always centrifuge tubes before opening. Do not mix by vortex or pipetting. Dissolve the lyophilized protein in ddH2O. It is not recommended to reconstitute a concentration less than 100 µg/ml. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Storage: Store at -80°C. Stable for at least 6 months from date of receipt under proper storage and handling Stability: conditions. NP 000791 RefSeq: Locus ID: 2246 UniProt ID: P05230 4162 RefSeq Size: Cytogenetics: 5q31.3 465 **RefSeq ORF:** Synonyms: AFGF; ECGF; ECGF-beta; ECGFA; ECGFB; FGF-1; FGF-alpha; FGFA; GLIO703; HBGF-1; HBGF1

|                                    | FGF1 (NM_000800) Human Recombinant Protein – TP721185XL  |
|------------------------------------|--|
| Summary:                           | The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family.<br>FGF family members possess broad mitogenic and cell survival activities, and are involved in<br>a variety of biological processes, including embryonic development, cell growth,<br>morphogenesis, tissue repair, tumor growth and invasion. This protein functions as a<br>modifier of endothelial cell migration and proliferation, as well as an angiogenic factor. It acts<br>as a mitogen for a variety of mesoderm- and neuroectoderm-derived cells in vitro, thus is<br>thought to be involved in organogenesis. Multiple alternatively spliced variants encoding<br>different isoforms have been described. [provided by RefSeq, Jan 2009] |
